

Why a Marine Study Tour program at Sunshine Beach State High School

The International Department in cooperation with the Science Faculty is now proud to offer a unique intensive two week Marine and Environmental Studies Program to satisfy the highest academic and environmental demand.

International School

The very successful International Program already in place at Sunshine Beach High is a perfect opportunity to mix with the rest of the world in a true International knowledge sharing environment.

What we offer

Some of the closed sessions will include:

- Marine Life and Habitat (touch and learn about sponges, starfish and other sea creatures)
- Rainforest and Comparative Study of Plants (Kondalilla Falls)
- Recognition and Mapping of Coast Profile
- Touch and Learn about Sea creatures
- Leaf Litter Ecology

Respectful approach to the Geology of the Dreamtime (Mary Cairncross Park) and aboriginal vision of the land intertwined with their life (wildlife painting and boomerang throwing under Gubbi-Gubbi tribe leadership).

How can we help students

To ease the language difficulties, some suitable bilingual support study material will be provided enabling selected students to better understand and experience, hands on, the variety of the scientific challenges of a marine environment in one of the most pristine places in the world.

Embedded lessons

While this program is intended for visitors only, students will also have, on request, the opportunity to be embedded in selected Marine Studies and Biology classes with Australian students.

Study with the best

The quality standard of this program is guaranteed by highly qualified Marine and Environmental Marine experts such as Sunshine Beach personnel and Underwater World specialists, academics from the Sunshine Coast University and other authorities in the field.

This is Sunshine Beach High - where study and fun complement each other.
